The RFC Series

The RFC Series (ISSN 2070-1721) contains technical and organizational documents about the Internet, including the specifications and policy documents produced by five streams: the Internet Engineering Task Force (IETF), the Internet Research Task Force (IRTF), the Internet Architecture Board (IAB), Independent Submissions, and Editorial.

ISO/IEC 27001 is an international standard to manage [information security](#). The standard was originally published jointly by the [International Organization for Standardization](#) (ISO) and the [International Electrotechnical Commission](#) (IEC) in 2005,^[1] revised in 2013,^[2] and again most recently in 2022.^[3] There are also numerous recognized national variants of the standard. It details requirements for establishing, implementing, maintaining and continually improving an information security management system (ISMS) – the aim of which is to help organizations make the information assets they hold more secure.^[4] Organizations that meet the standard's requirements can choose to be certified by an accredited certification body following successful completion of an [audit](#). A [SWOT analysis](#) of the ISO/IEC 27001 certification process was conducted in 2020.^[5]
