# Containers

### An experimental feature in Firefox Nightly

Stéphanie Ouillon Platform Security Engineer @Mozilla

# **Contextual Identity**

Be who you want, when you want

### Different contextual identities on the web

I have two gmail/twitter/yahoo/... accounts

I want relevant ads while I shop, but not while I work

 It makes me uncomfortable to bank on the same browser I sometimes use for shady sites

# **Current Solutions**

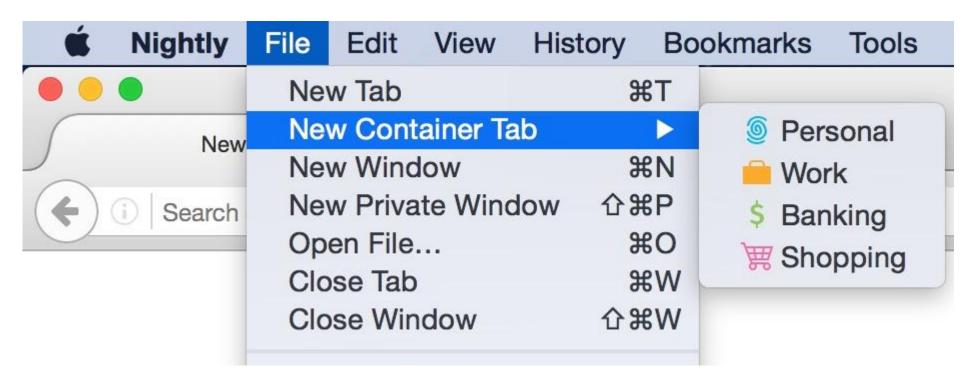

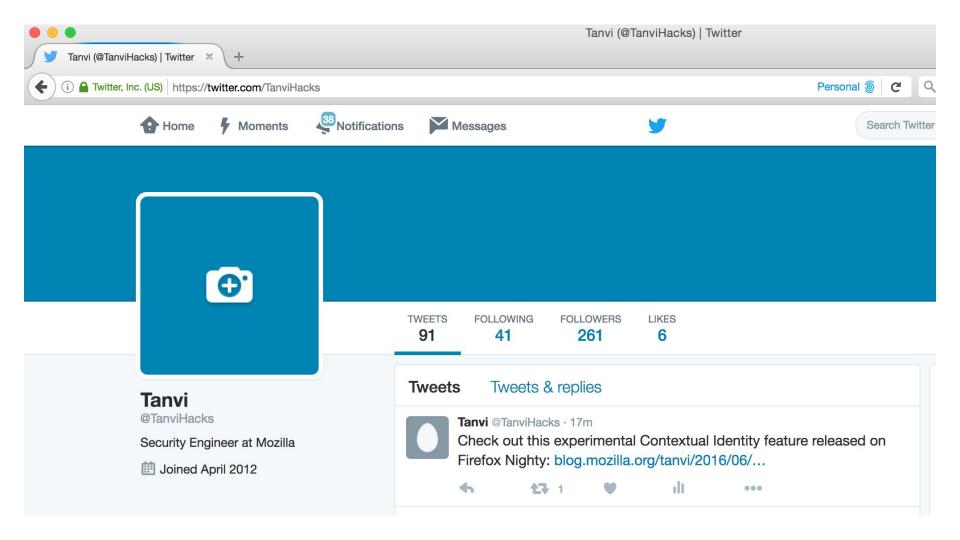

# **Containers Solution**

### What browser data is segregated by containers?

#### Separated

- Cookies
- localStorage
- indexedDB
- Cache

#### Shared

- History
- Bookmarks
- Saved Passwords
- Saved Search and Form data
- HSTS Flags
- OCSP Responses
- Security Exceptions for Invalid TLS Certificates
- Permissions

# **Origin Attributes in Gecko**

- **Before**: (scheme, host, port)
- Today: (scheme, host, port, originAttributes)
- Added userContextId OriginAttribute
- Same Origin Policy Enforcements:

```
(https, example.com, 443, userContextId=1) != (https, example.com, 443, userContextId=2)
```

# How does it improve privacy and security?

## 1. Segregating tracking cookies

/!\ fingerprinting, keep using Tor to minimize your fingerprint as much as possible

### 2. Compartmentalizing sensitive information

## **Experimental** feature

**Enabled in Firefox Nightly 50** 

/!\ Bugs related to **containers separation** still being fixed

### **Feedback**

Feedback: Form
