

The **Guide**  
of **Security**  
*Jerk*

RMLL Sec 2016 - Rump session

*Previous edition*

# Le Guide du Connard du Logiciel Libre

<https://2015.rmll.info/le-guide-du-connard-du-logiciel-libre>

# HOW TO be a security jerk

~ *Developer* ~

~ *Sysadmin* ~

~ *End user* ~

# *Developer*

- ❌ Store passwords in base64 (or in base32 for 32bits systems)
- ❌ Require specific lib versions and discourage any upgrade
- ❌ Invent your own cryptographic algorithm

# *Sysadmin*

- ❌ export TLS\_REQCERT=never (aka Malware In The Middle)
- ❌ Write your own Config Management (SSH for kids)
- ❌ Always run processes as root and disable SELINUX

# *End user*

- ❌ Don't trust One Time Password as is it always changing
- ❌ Click everywhere, IT is a game
- ❌ Use pastebin as password manager

*Links for bastards*
