The association

- CZ.NIC z. s. p. o., .CZ domain registry
 - since 1998
 - making Internet better and safer
 - CSIRT.CZ team
 - BIRD Internet routing daemon
 - KNOT DNS server and resolver
- CZ.NIC LABS means open source and free software
 - Turris is a part

```
root@misicoolbook ~ # networkctl status
• State: routable
  Address: 37.58.253.246 on wlan0
           192.168.127.1 on virbr0
           2a01:729:2:aa12:f0bb:87ff:fe33:bbb7 on wlan0
           fd51:119f:637d:aa12::8fe on wlan0
           fd51:119f:637d:aa12:f0bb:87ff:fe33:bbb7 on wlan0
           fe80::f0bb:87ff:fe33:bbb7 on wlan0
  Gateway: 37.58.253.1 (CZ.NIC, z.s.p.o.) on wlan0
           fe80::da58:1:fe00:451b (CZ.NIC, z.s.p.o.) on wlan0
  DNS: 37.58.253.1
```

How we started?

- Project:Turris
- WHY?
- 4 years ago
 - open source
 - updates!
 - data collection and analysis
 - Made in Czech Republic
 - research and non-profit
- "Where can I buy it?"

- buyable version **for all**
- keeping values and key features
- learning and improving
- started on **INDIEGOGO**
 - 857% means \$1,2 mil
 - big raise and internationalisation of our community
 - change a lot in plans

Making Omnia alive

- design by Turris team in CZ.NIC
 - components all around the world
 - plain PCB in China
 - Made in Czech Republic
-
- small batches
 - schematics online
 - PCB plan in the future (on T-shirts)
-
- 4382 pcs on IGG
 - more than 1500 in retail
 - working on next 5000 pcs batch

What does it have?

- 12 fully programmable RGB LEDs with a button

What's running on it?

- Turris OS based on OpenWRT
 - easy config thanks to **Foris**
 - advanced settings in **LuCI** or **terminal**
 - snapshots thanks to **btrfs**
 - restore from USB drive saves it all
 - comfortable **LXC** integration
- can route **1 Gbit/s**
- HW and SW expandability

Security

- by design of HW and a service
 - automatic updates bring **fast** security fixes and new **features**
 - collective firewall
 - data collection
 - honeypots and minipots
 - using know-how from running CZ Internet
 - syslog-ng
 - Suricata IDS/IPS
- **CSIRT.C**
- **syslog-ng**
Open Source Edition

CSIRT.CZ

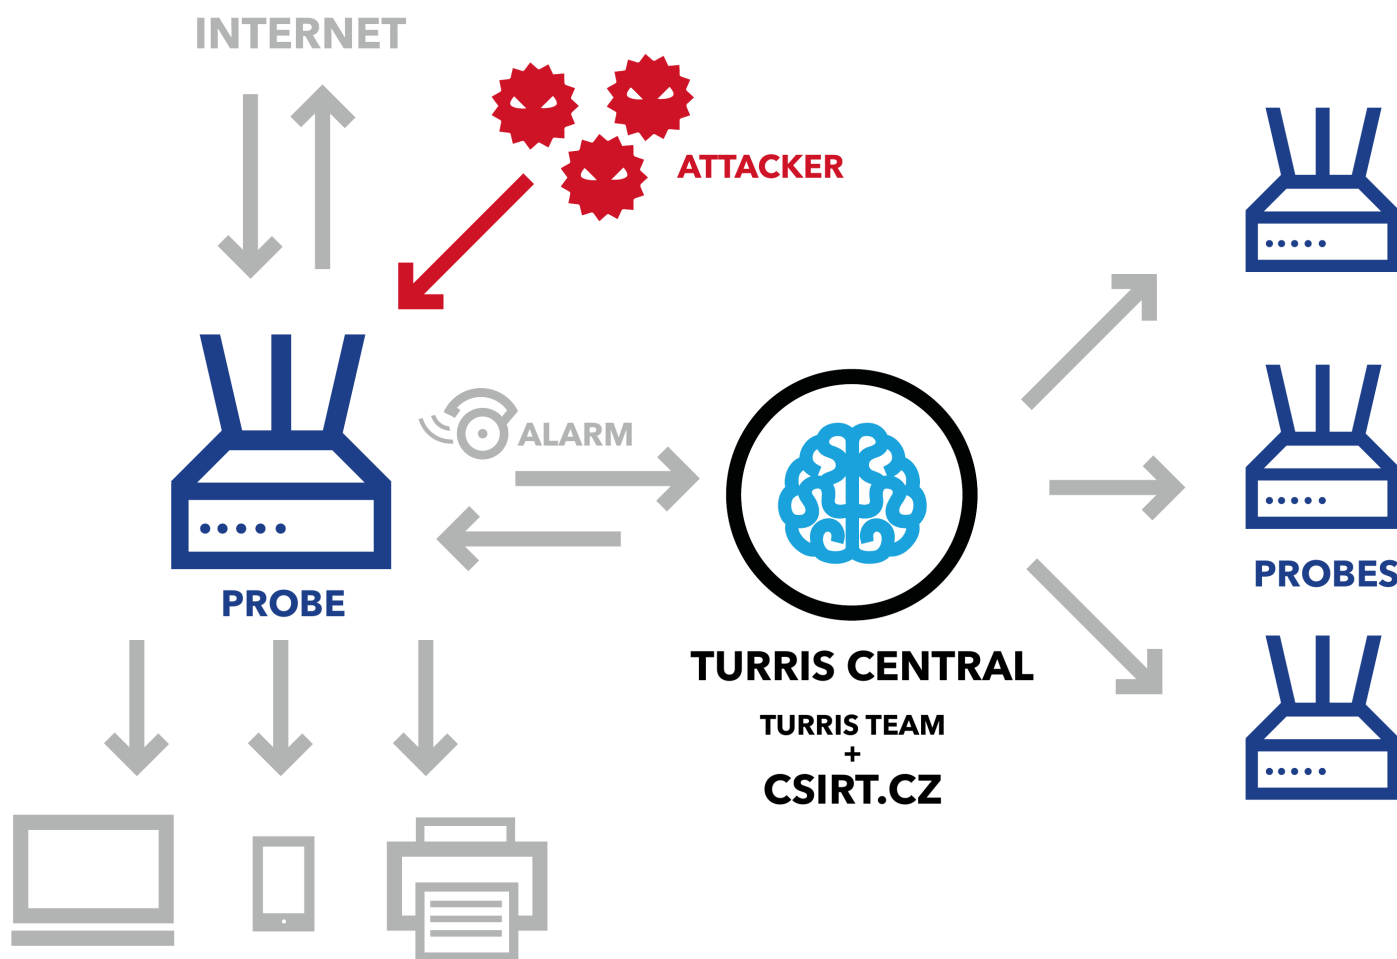

syslog-ng

Open Source Edition

CZ DOMAIN
REGISTRY

How the Project Turris works?

Complex secure ecosystem consisting of ~~2000~~ pcs secure-by-design routers (probes) and Turris Central

What is Turris central?

Updates, updates, updates...

- instant security fixes
- regular updates every 14 days
- new features every month

Collective firewall

- rules made by Turris team for all
- based on collected data
- better thanks to CSIRT.CZ

Data collection

- anonymised data about attacks
- no ports 80, 8080, 443...
- mainly telnet, SSH
- we know MIRAI well
- we are trying to recognise new botnets and malware

Honeypots/minipots as-a-service

- bad guy forwarded to our servers
- no possible harm to you
- not using power of your system
- logging their activity
- making fixes for all

@Buritos007 - user on Twitter

Parental control

- easy-to-use
- "foolproof"
- "bulletproof"
- starting with new device detection

Suricata, syslog-ng and more....

- workshop
- today
- 16:20
- Michal Hrušecký, Turris developer

Jarda - hackathon attendee

quietsche - forum user

A black wireless router with six antennas. The front panel features a USB port, a power button, a row of six status LEDs labeled 0 through 5, four Ethernet ports labeled PC1, PC2, PC3, and A, and a power indicator light. The router is placed on a white surface against a textured wall.
